YONGJIN JAVASUKA GARMENT

About Hojeon

Manufacturing premium products

Starting with two employees in 1985, HOJEON has grown as a global company with 15,000 employees at 7 overseas production bases.
As a garment manufacturer, we produce and supply high quality products to 20 major brands worldwide.
We are specialized in high-functional outdoor wear and sports wear as well as team uniform which requires complicated process and high attention to details.

Establishing a production hub in Indonesia

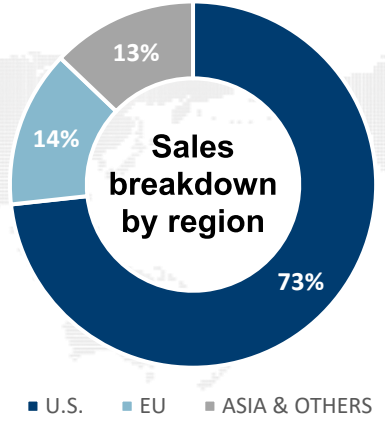

Since 1991, we have set up our own production bases in Indonesia and created our own manufacturing strategies based on high-performance, value added products through 'skilled labor'.

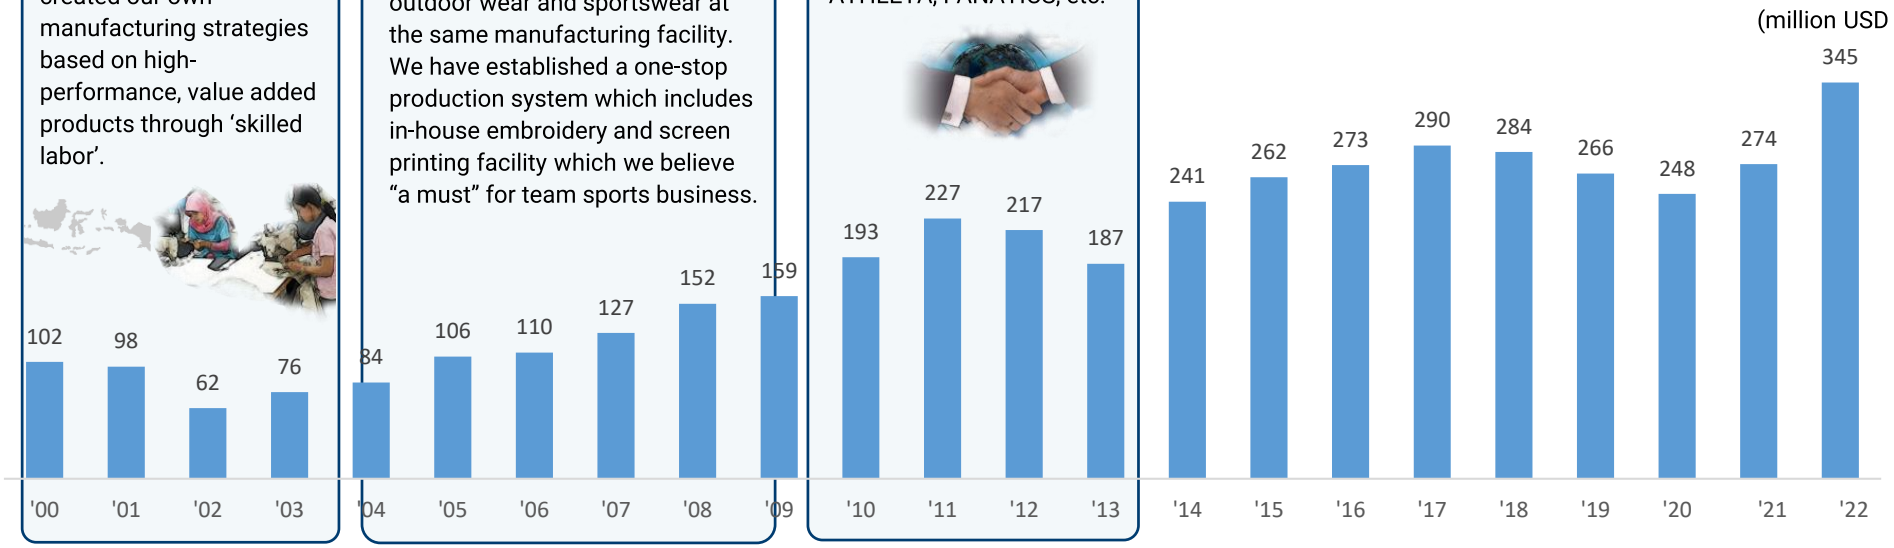

Producing high-performance outdoor wear and sports wear for individuals and teams

We are the only company in South Korea who is capable of producing both high performance outdoor wear and sportswear at the same manufacturing facility. We have established a one-stop production system which includes in-house embroidery and screen printing facility which we believe "a must" for team sports business.

Global major brands

We are working with global major brands such as The North Face, Under Armour, ATHLETA, FANATICS, etc.

Future Plan

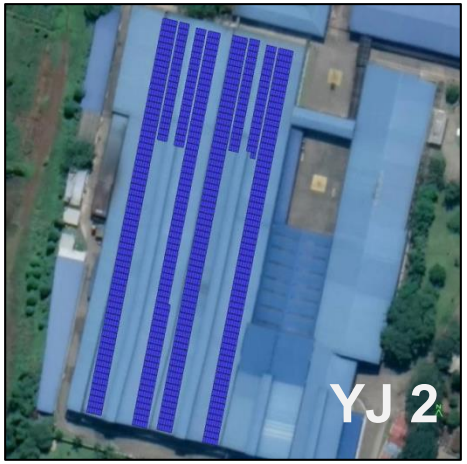

PLTS (Pembangkit Listrik Tenaga Surya) - Solar Power Generation

The solar panels produce power without any waste or emissions into the environment. So there's no effect to the climate unlike fossil fuels that cause the greenhouse effect. The detrimental impact of a large carbon footprint to our environment can be eased by the installation of a solar system. By doing so, we are investing in clean energy for our generation and the next.

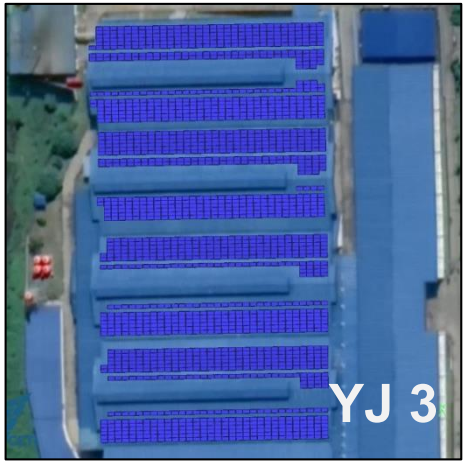

By installing photovoltaic (PV) panels on your factory, we take sustainability and environmental protection seriously. Instead of relying on fossil fuels, we've opted to power our factory with clean and efficient solar power.

Sustainability is development that suffices the present without compromising the ability of future generations to meet their own needs. Solar energy personifies this definition of sustainability, considering that the sun's energy can be used indefinitely without diminishing its future availability.

While there are many factors that affect the amount of energy a solar panel can produce, we can expect a solar panel to generate about 2 GWh per year, which saves 80% on electricity of Yongjin Factory used per year.

System Metrics	
Design	Design 3_Factory 2_ 1MW (Revised)
Module DC Nameplate	992.2 kW
Inverter AC Nameplate	800.0 kW Load Ratio: 1.24
Annual Production	1.077 GWh
Performance Ratio	80.5%
kWh/kWp	1,085.9
Weather Dataset	TMY, 10km Grid, meteonorm (meteonorm)
Simulator Version	8d674e8416-a053910f2a-43ac7afb3e-e4a58a9d1e
